

weeSeepy©

intro

weeSeepy is a small (wee) constraint programming (seepy) toolkit written in java. It was inspired by [Mini-CP](#) and [choco](#).

weeSeepy is an ongoing development project. It is intended that weeSeepy will be used for teaching constraint programming, allowing students and project students to get under the hood and see how a CP toolkit might be implemented. Therefore, it can be used in the classroom and by project students.

Off course, we always want to combine teaching with research. Being small, and using simple design concepts, it is possible for an individual to fully understand weeSeepy and have full control of weeSeepy. Therefore researchers may use weeSeepy to test out new constraints, variable and value ordering heuristics and new search algorithms. A recent example of this, is the work by Gilles Pesant where **used mini-CP in this paper**.

The goal: to implement a small CP toolkit , making the simplest possible design decisions, and use it for teaching and research

Almost feel like you have to implement everything before you even start!

Inspired by miniCP and influenced by choco

```

1 import java.util.*;
2
3 public class Col3 {
4
5     public static void main(String[] args){
6         Problem pb = new Problem("Col3");
7
8         int n = 5;
9         int k = 3;
10
11         IntVar[] v = new IntVar[n];
12
13         for (int i=0;i<n;i++) v[i] = pb.intVar("v_" + i,1,k);
14
15         pb.post(new NotEquals(pb,v[0],v[1]));
16         pb.post(new NotEquals(pb,v[0],v[2]));
17         pb.post(new NotEquals(pb,v[1],v[2]));
18         pb.post(new NotEquals(pb,v[1],v[4]));
19         pb.post(new NotEquals(pb,v[2],v[4]));
20         pb.post(new NotEquals(pb,v[3],v[4]));
21
22         pb.trace = true;
23         pb.show();
24         System.out.println(pb.bt());
25         pb.show();
26     }
27
28 }

```
